

FACT SHEET

CUSTOMERS AND MARKETS

Qatargas produces three main products for export: Liquefied Natural Gas (LNG), Condensate, and Sulfur. By the end of the decade we will be exporting these products to every corner of the globe. This goal is matched by our commitment that every market and every customer will be completely satisfied with our products and services.

Natural gas is increasingly becoming the fuel of choice for customers around the world due to its clean-burning and lower emission qualities. LNG is a way of delivering natural gas around the world, safely and reliably. By the end of 2007, we successfully delivered 1,260 of these cargoes to our customers.

Currently Qatargas 1 supplies LNG under long term contracts to customers in Japan and Spain. Qatargas 2, Qatargas 3 and Qatargas 4 will be supplying markets in Europe, the USA and the UK beginning in 2008.

Our customers in Japan were our foundation customers for the development of the original Qatargas trains. We currently supply eight companies in Japan. The majority of these are power and gas utility companies which supply gas and electricity to wholesale and millions of domestic users in the Japanese market.

In addition, in recent times we have supplied spot cargoes to Spain, Japan, USA, France, Turkey and United Kingdom.

By the end of the decade we expect to achieve our vision to become the world's leading supplier of LNG by exporting 42 million tonnes per annum.
